

Come Join the ISUG V-SIG for WorkSpace!

ISUG introduces a new Virtual Special Interest Group (SIG) for Sybase WorkSpace. SIGs are a great way to learn more about the product and collaborate with fellow users. Every month, there will be a presentation on a new development topic, including Database development, implementing services, and mobile development. This is also an opportunity to ask questions of Sybase engineering and product management. Put it on your calendar today!

Upcoming Schedule

September 14, 2006	February 8, 2007
October 12, 2006	March 8, 2007
November 9, 2006	April 12, 2007
January 11, 2007	May 10, 2007

Sybase® WorkSpace: Do Something More Interesting

JAM WITHIN ONE RAD ENVIRONMENT

Sybase WorkSpace, the design and development environment for Sybase servers, is a Java toolkit offering the five most important design and development tools in an integrated easy-to-use open source framework.

- Database development
- Enterprise modeling
- Web application development
- Services-oriented development
- Mobile development

SKIP THE MUNDANE AND BUILD BUSINESS LOGIC THAT ROCKS

With industry-leading and integrated model-driven design, visual development, and task-based wizards, Sybase WorkSpace automates mundane tasks and cuts the typical development tool learning curve, freeing you to concentrate on what's important—business logic.

TUNE YOUR INSTRUMENT TO ACHIEVE DEVELOPMENT FREEDOM

WorkSpace's modular packaging allows enterprises to decide how to assign business-critical tasks to developers, rather than requiring them to fit into ill-fitting "roles" predetermined by a vendor. You buy only the pieces you need, enabling you to customize your environment as you see fit.

Get Sybase WorkSpace today and start building applications that rock. For more information and to download white papers, visit www.sybase.com/workspace
